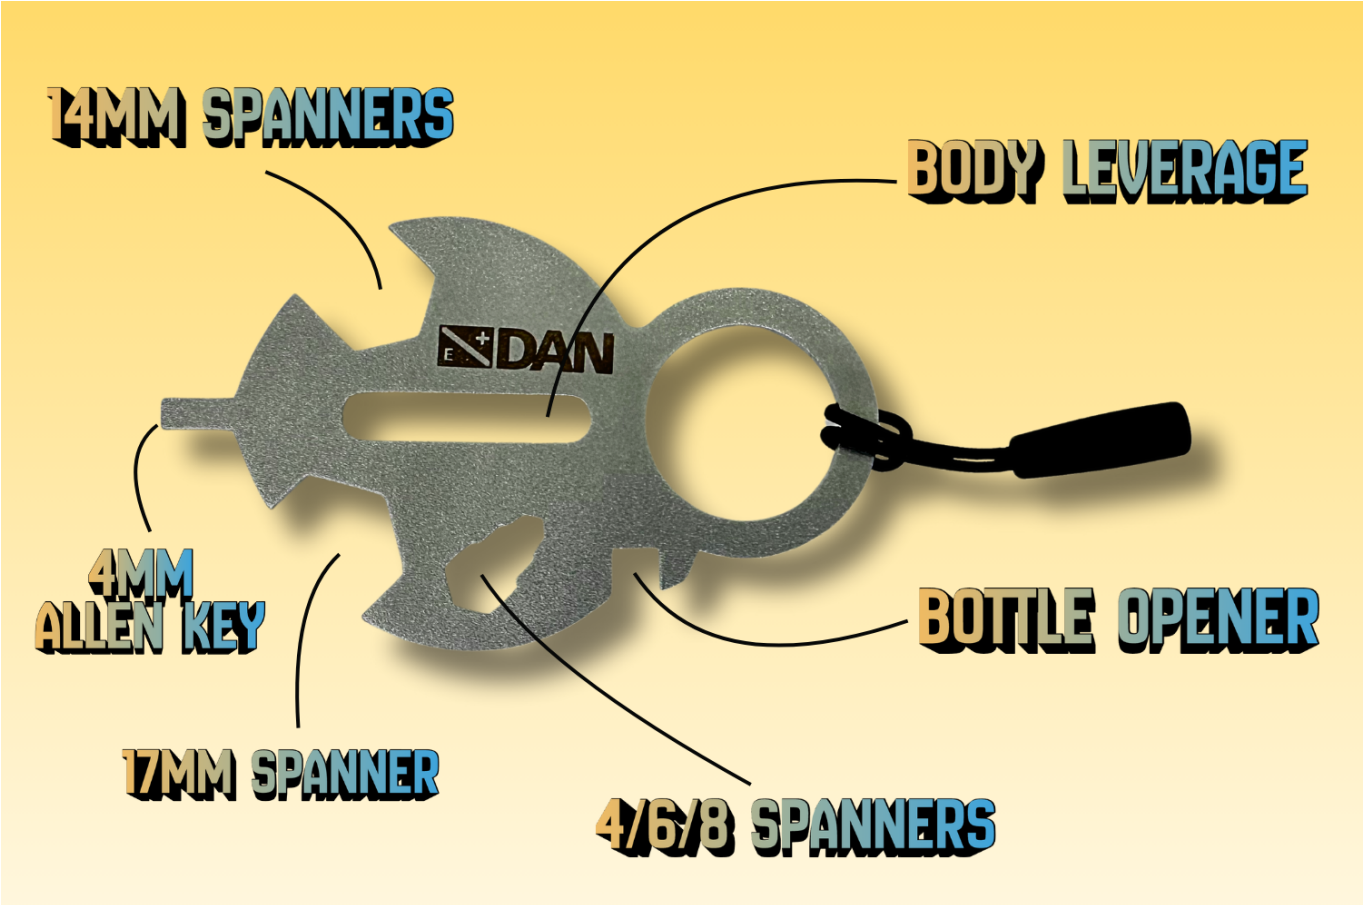
The DAN Multitool: Your Pocket-Sized Save-A-Dive Kit

Every diver has a few trusted items in their gear bag that may seem insignificant... until they save a dive. The double-ended bolt snap, for example, hides in plain sight, but performs a dozen jobs with quiet reliability. The **DAN Multitool** belongs to the same family of humble heroes: compact, lightweight, and designed to solve small but potentially consequential gear issues – before, after, or during a dive.

Made for daily use, the Multitool offers a set of cleverly chosen functions tailored to the needs of recreational and professional divers alike. Its **440 stainless-steel** construction provides durability in the marine environment, and the tool elements support a wide wide range of small adjustments a diver may need to make on the go.

With its compact design, the DAN Multitool is easy to clip into a drysuit pocket or stow in a small pouch, without adding bulk to your kit. Having it always with you means it'll be there when you need it. Much like other deceptively simple accessories divers rely on, it encourages good habits: **regular inspection, preventive maintenance, and a more mindful relationship with the equipment that keeps us safe underwater.**



Here is a short list of the practical tasks the Multitool can perform:

1. **Tighten or loosen common dive gear** using the integrated **4, 6, 8, 14, and 17 mm spanners**. Useful for hose connections, stage rigging components, and other small fasteners.
2. **Adjust equipment requiring a 4 mm Allen key**, such as port plugs, certain hose swivels,

accessory mounts, and BC hardware.

3. **Open a cylinder valve knob or cap that's slightly stuck**, using the tool's sturdy, **2 mm-thick 440 stainless-steel** body as leverage – always within safe, non-damaging limits.
4. **Aid in routine pre-dive checks and minor adjustments**, thanks to its compact **95 mm length**, allowing divers to fine-tune equipment without bulky tools.
5. **Serve as a corrosion-resistant pocket maintenance tool**, thanks to the **440 stainless steel** (55/56 HRC) construction that withstands marine environments.
6. **Open bottles** with the integrated **bottle opener**, adding a lighthearted but appreciated post-dive function.
7. **Represent your commitmen**t to dive safety and preparedness with its **exclusive DAN-branded design**, making it easy to identify and promote awareness.

*Please note: **The Multitool isn't meant to replace professional servicing**, nor should it encourage divers to attempt complex repairs outside their training. Instead, it's a reliable companion for everyday readiness, helping you address the little things before they escalate into bigger problems. As with any tool, the key is to know its capabilities, use it with intention, and understand when it's time to hand the job over to a qualified technician.*
