## **Neurological Assessment**

The nervous system consists of the:

- A. Brain, spinal cord and nerves
- O B. Vertebrae and skull
- O C. Heart, lungs and brain
- O D. Head, torso and limbs

None ●

2.

Neural pathways may be interrupted by:

- O A. Stroke
- O B. Decompression illness
- O C. Trauma
- O D. All of the above

None ●

3.

True or False: Strokes may be caused by a blood clot or bleeding.

- O A. True
- O B. False

None ●

4

Strokes may be evident by:

- O A. Sudden loss of motor function
- O B. Inability to formulate or understand words
- O C. Loss of visual field
- O D. All of the above

None ⊙

5.

True or False: Stroke is the number-one cause of long-term disability.

- O A. True
- O B. False

| None ●<br>6.<br>True or False: Prompt medical intervention may reduce the possibility of permanent disability<br>of decompression illness (DCI) or stroke.   |
|--|
| <ul> <li>○ A. True</li> <li>○ B. False</li> <li>None ●</li> <li>7.</li> <li>F-A-S-T stands for:</li> </ul>   |
| <ul> <li>A. Facts, attitude, sensitivity, talent</li> <li>B. Face, arms, speech, time</li> <li>C. Feet, arms, spine, toes</li> <li>D. Face, ankles, stability, touch</li> <li>None ●</li> <li>8.</li> </ul>  |
| Decompression illness (DCI) includes arterial gas embolism and decompression sickness.  ○ A. True  ○ B. False  None   9.  Which of the following is NOT a common sign of DCI?  |
| <ul> <li>A. Pain</li> <li>B. Numbness</li> <li>C. Vomiting</li> <li>D. Paresthesia (tingling)</li> <li>None •</li> <li>10.</li> <li>EMS should be called:</li> </ul>   |
| <ul> <li>○ A. As soon as you suspect a neurological injury</li> <li>○ B. After you have conducted a neurological assessment</li> <li>○ C. 30 minutes after the first assessment so you can advise EMS if there are changes</li> <li>○ D. Only if requested by the injured person</li> <li>None ●</li> <li>11.</li> <li>Which of the following is not one of the four functional areas of neurological assessment?</li> </ul> |
| <ul> <li>A. Mental function</li> <li>B. Cranial nerves</li> <li>C. Motor function</li> <li>D. Cardiovascular function</li> <li>E. Coordination and Balance</li> <li>None •</li> <li>12.</li> <li>Mental function evaluates:</li> </ul>   |
| <ul> <li>A. Orientation to person, place, time and event</li> <li>B. Memory and speech</li> <li>C. Comprehension and computational skills</li> <li>D. All of the above</li> </ul>  |

None ●

in the event

| 13. Which of the following is not part of the cranial nerves evaluation?  |
|---|
| <ul> <li>A. Facial droop</li> <li>B. Eye movements</li> <li>C. Grip strength</li> <li>D. Slurred speech</li> <li>None ●</li> <li>14.</li> </ul> |
| The Romberg test assesses:  |
| A Matarfunction   |

- $\circ$  A. Motor function
- O B. Cranial nerves
- O C. Mental status
- O D. Balance

None ●
