## **Oxygen First Aid**

1. The atmospheric air we inhale contains \_\_\_\_ % oxygen.

- O A. 12
- O B. 16
- O C. 21
- O D. 27

None ●

2.

An absence of oxygen:

- O A. May cause cell death
- O B. Is known as anoxia
- O C. May cause unconsciousness
- O D. All of the above

None ●

3.

True or False: The most important initial actions in responding to diving accidents are to recognize there is a problem, administer 100 percent oxygen and activate emergency medical services.

- O A. True
- O B. False

None ⊙

4.

Providing a high concentration of oxygen to an injured diver may provide which of the following benefits?

- O A. Acceleration of inert gas elimination
- O B. Reduce bubble size
- O C. Enhance oxygen delivery to tissues
- O D. Reduce inflammation
- O E. All of the above

None ●

5

Percentage of oxygen delivered when using a demand valve is influenced by:

<ul> <li>○ A. Flow rate and mask fit</li> <li>○ B. Mask fit and mask seal</li> <li>○ C. Flow rate and mask seal</li> <li>None ●</li> <li>6.</li> <li>In remote areas, the priority in oxygen delivery is:</li> </ul>
<ul> <li>A. To conserve oxygen supplies</li> <li>B. To maintain the highest fraction of inspired oxygen possible</li> <li>C. Limit the flow of oxygen</li> <li>D. None of the above</li> <li>None •</li> <li>True or False: A demand valve flows only when the injured diver inhales, allowing the oxygen to last longer.</li> </ul>
<ul> <li>○ A. True</li> <li>○ B. False</li> <li>None •</li> <li>8.</li> <li>The risks of handling oxygen can be reduced by:</li> </ul>
<ul> <li>○ A. Keeping the oxygen units free of hydrocarbons found in oils and lubricants often found on dive boats</li> <li>○ B. Opening the valve slowly</li> <li>○ C. Keeping the unit away from the heat of the sun</li> <li>○ D. All of the above</li> <li>None ●</li> <li>9.</li> <li>Oxygen regulators should be serviced:</li> </ul>
<ul> <li>○ A. Annually</li> <li>○ B. Every two years</li> <li>○ C. Every five years</li> <li>○ D. Every 10 years</li> <li>None ●</li> <li>10.</li> <li>True or False: The first priority when attending to injured divers is to take them to the nearest appropriate medical facility for evaluation rather than directly to a hyperbaric chamber.</li> </ul>
<ul> <li>○ A. True</li> <li>○ B. False</li> <li>None •</li> <li>11.</li> <li>In the event of a dive accident, as a first aid provider your responsibility is to:</li> </ul>
<ul> <li>A. Treat the injured diver, family and friends with respect</li> <li>B. Act in a decisive manner</li> <li>C. Perform according to your knowledge and skill level</li> <li>D. See that the diver is referred to medical care</li> <li>E. All of the above</li> <li>None •</li> <li>12.</li> </ul>
Which of the following are two important considerations when selecting an oxygen cylinder?
A. Toxicity and distance to hyperbaric facility

- B. Capacity and time to emergency medical services
  C. Flammability and durability
  D. None of the above

None ●
